31 AUGUST 2009

The Company's investment objective is to achieve long term capital growth by investing in high growth, development stage biotechnology companies that are either quoted or unquoted. The Company invests in shares of companies that are considered good value with experienced management and strong potential upside through the development and/or commercialisation of a product, device or enabling technology.

Investment Manager's August Market Review - Solid month for biotech despite quiet period for newsflow

In August, the NASDAQ Biotechnology Index (NBI) gained 2.3%, and the Russell 2000 Growth Biotechnology Index or R2GBIOR (focused on small and mid capitalisation stocks) gained 5.6%, versus the S&P500 which gained 6.1% (all in Sterling terms). The Company's Net Asset Value (NAV) increased by 2.9% while the market share price increased by 3.4%.

The biotechnology sector had a solid month on the back of a continued improvement in investor risk appetite in broader markets, as well as continued positive sentiment towards the sector following July's significant M&A and clinical newsflow. The Dollar also strengthened against Sterling by 2.5% enhancing Sterling-adjusted returns.

While M&A and clinical news was thin during month there was significant regulatory newsflow. The key event was the FDA panel review of Amgen's osteoporosis drug denosumab (Prolia). As expected, the drug received unanimous positive endorsement for use as a treatment of post-menopausal osteoporosis, but the panel rejected Amgen's more speculative application for the use of the drug in prevention.

The level of financings in the sector slowed down as would be expected over the summer, but mid-cap biotech company Onyx Pharmaceuticals did manage to raise \$310m in a combined equity and convertible debt offering, stoking speculation that the company could be preparing to acquire a smaller-cap biotech company with development-stage R&D programmes to follow its marketed cancer drug Nexavar.

As at 31 August 2009

Nothing in this document represents investment advice and is therefore not a recommendation to buy or sell shares. The value of investments, and the income from them, may go down as well as up, and is not guaranteed, and investors may not get back the full amount invested. Exchange rate changes may cause the value of overseas investments to rise or fall.

Investors should bear in mind that investment in biotechnology shares can be subject to risks not normally associated with more developed markets or stocks. Investing in the biotechnology sector carries some particular risks and investment in the Company should be regarded both as long term and as carrying a high level of financial risk.

In addition, there is no guarantee that the market price of shares in investment trusts will fully reflect their underlying NAV and it is not uncommon for the market price of such shares to trade at a substantial discount to their NAV.
