

INTERNATIONAL BIOTECHNOLOGY TRUST PLC

Interim Report

Six months ended 28 February 2006

The Company's investment objective is to achieve long term capital growth by investing in high growth, development stage biotechnology companies that are either quoted or unquoted. IBT invests in companies that are undervalued, with experienced management and strong potential upside through the development and/or commercialisation of a product, device or enabling technology.

Chairman's Statement

PERFORMANCE

International Biotechnology Trust plc (IBT) has made good progress. It is pleasing to report the continued increase in net asset value (NAV) per share of IBT of 20.1% from 121.30p (restated in accordance with IFRS) to 145.70p during the six months to 28 February 2006. Over the same period the share price of IBT rose 26.6%, the NASDAQ Biotech Index (NBI) rose by 13.9%, the Merrill Lynch Small Cap Biotech Index (MLSCI) rose by 7% (or 18.9% before a significant re-balancing of the index) and the Bloomberg UK Biotechnology Index (BUKBI) rose by 17.7%, all in sterling terms.

Over the six months under review the discount of the IBT share price to NAV was volatile narrowing from 14.1% (restated) to 9.4% but as realisations from the unquoted portfolio increased NAV on a number of occasions during the six months, the widest discount was 15.1% and at its narrowest was 5.5%.

Net assets rose by £10.6m during the reporting period. The major contributors to this rise were KuDOS Pharmaceuticals (+£2.0m) and Micromet (+£3.0m). There was one write-down in the unquoted portfolio in the reporting period. The holding in Affibody was written down to reflect an impending funding event (−£0.9m). These movements include the impact of currency changes which increased net assets by a total of £1.1m during the six months under review.

The performance of IBT's quoted portfolio calculated on a time-weighted return basis (assuming mid-month cash flows) showed an increase of 19.3%. On an unweighted basis (ignoring the timing of transactions) the return was 14.6%.

During the period under review, there have been two movements from the unquoted to the quoted portfolio by way of IPOs (Sunesis in the U.S. and Genosis in the U.K.), one acquisition from the unquoted portfolio (KuDOS by AstraZeneca) and the announcement (which has still to complete) of the merger of an unquoted portfolio company (Micromet) with a quoted portfolio company (Cancervax).

At 28 February 2006, the level of cash, money market instruments and other net assets was £7.1m or 10.3% of net assets of which, £1.3m or 1.9% of net assets, was uncommitted cash. This total cash level had decreased from £8.8m or 15.1% of net assets at 31 August 2005 and had recently been increased by the receipt of most of the proceeds of the sale of KuDOS. Prior to this partial realisation, at the end of January 2006, the uncommitted cash was £0.2m.

VALUATIONS

Throughout the interim period, IFRS has been applied and no discounts were applied to quoted holdings. The proposed merger of Micromet and Cancervax was announced in January 2006. This has resulted in the valuation of Micromet (which remains in the unquoted portfolio, and IBT's largest holding at the interim period end) being linked to the share price of Cancervax while a full valuation will only be recognised when shareholders approve the merger. Once the merger has been approved, the Micromet holding will move to the IBT quoted portfolio.

During the reporting period the net effect of the changes in the Directors' valuations of unquoted companies was a rise in net assets of £4.1m. At 28 February 2006, 22.7% of net assets were invested in unquoted companies. The Board continues to believe that the guideline that up to 40% of net assets may be invested in unquoted companies is appropriate. The unquoted exposure of IBT will vary depending on the point in the market cycle, realisations and deal flow.

SHARE BUY-BACKS AND EXTRAORDINARY GENERAL MEETING

In the period since 31 August 2005, the Board has purchased 750,000 shares for cancellation. The discount to NAV to which the shares of IBT have traded is constantly under review and the Directors continue to consider share buy-backs to be one of a number of tools that may be used to enhance shareholder value. To provide additional flexibility in our use of share buy-backs, we have decided to seek approval from shareholders for IBT to repurchase its shares and to hold them in treasury for subsequent reissue. The Board believes that this will give IBT flexibility by providing an additional source of liquidity for the secondary market. A Circular to shareholders setting out our detailed proposals and convening an Extraordinary General Meeting will be distributed with this Interim Report.

INTERNATIONAL FINANCIAL REPORTING STANDARDS (IFRS)

From 1 September 2005, IBT has prepared its financial statements under IFRS, as adopted for use in the European Union. These accounts are the first set of IBT's results prepared exclusively on this basis. Details on the impact of the move to IFRS are set out in the notes to these accounts.

Chairman's Statement continued

PROSPECTS

The IBT portfolio is constructed to give shareholders exposure to global biotechnology and medical technology through investments in both quoted and unquoted companies. The focus of IBT is on quoted mid- and small-capitalisation stocks, and the unquoted universe. When these components perform well, as they did in the six months under review, investors will benefit and indeed have benefited from the out-performance in the market capitalisation strata where IBT focuses, augmented by the excellent realisation-driven performance of the unquoted portfolio.

The quoted portfolio is comprised of investments in companies which our Manager, SV Life Sciences, expects to have positive clinical, regulatory or commercial events over the next six to eighteen months. The unquoted portfolio consists of relatively recent investments, including two made in the period under review, close to cash assets (such as Aderis and KuDOS), and other unquoted investments, the prospects for which the Board believes are good. Recent mergers and acquisitions have already brought the biotechnology sector into focus for many investors and as the pace of these transactions increases, the positive outlook of the sector should continue to improve. IBT has already benefited from this activity in the period under review, and with its focus on the small- and mid-capitalisation strata, is further positioned for an advantage as the focus of investors continues to move from the largest capitalisation names.

Investment Manager's Review

MARKET REVIEW

At the start of our year in August 2005, U.S. and European biotechnology indices paused before a decline that lasted until early November. While no one factor appeared to explain this decline, in retrospect a sensitivity to risk driven by higher commodity prices, combined with the U.S. mutual fund year-end appeared to be the general market pressures. More specifically in biotechnology, changes at the FDA and negative clinical and regulatory events seemed to have been the key sector drivers. Previously, over the early summer 2005, the largest U.S. biotechnology companies reported quarterly sales and profits which were better than expected resulting in the out-performance of, for example, Amgen and Genentech (whose market capitalisations briefly exceeded \$100 billion), compared to small- and mid-capitalisation names, where this company has its focus.

However, from early November 2005, the U.S. and European biotechnology indices advanced at a similar rate to the broad technology indices although in biotechnology the focus has been away from the largest capitalisation names, towards the small- and mid-capitalisation space. The components of this appreciation which, at the time of writing extends about four months to the end of our interim period, have been merger and acquisition (M&A) activity by both pharmaceutical and biotechnology companies, and positive clinical and regulatory events.

M&A activity by pharmaceutical companies has been as a result of the increasing pressures of drug safety concerns, generic competition to their larger products, and a tougher regulatory environment for primary care medicines. This has led pharmaceutical companies to view the biotechnology sector as a source of specialty products with long patent lives where the drug safety review is likely to be less costly. In early 2005, this resulted in anti-infective companies such as Vicuron in the U.S. being acquired by Pfizer and vaccine companies Corixa and ID Biomedical being acquired by GlaxoSmithKline. Towards the year-end 2005 this emphasis seemed to have shifted towards earlier stage companies with portfolio company KuDOS being acquired by AstraZeneca.

The Medicare Part D initiative in the U.S., designed to give senior citizens greater access to cheaper prescription medicines was initially thought to be positive for pharmaceutical companies from higher volume sales. It is however now becoming apparent that this may be another pressure for the pharmaceutical industry as low cost generic

medicines with average wholesale prices, not their higher cost branded counterparts with average selling prices are favoured by lower co-payments from Part D participants.

The larger biotechnology companies are also not without their pressures with the approval in late January 2006 of Europe's first biosimilar (follow-on, or generic biologic), Omnitrope (recombinant human growth hormone) by Novartis. This is perhaps another reason for the shift from larger capitalisation, to mid- and smaller capitalisation biotechnology companies, particularly in the U.S.

OUTLOOK

The record of IBT's portfolio companies in the last six months has been excellent with significant drug approvals, clinical success and commercial agreements signed in the quoted portfolio together with IPOs and M&A exits in the unquoted portfolio. There seems now to be a different type of IPO window in both the U.S. and Europe where market participants no longer talk of a window being 'open' or 'closed', rather than conditionally open at a 'basal' level. This means that fewer companies will be able to list than in the peak times of 1999 to 2000, and those that do manage to list will be at reasonable valuations and with viable, later stage businesses. This has to be contrasted with the current situation on London's Alternative Investment Market (AIM) where it seems biotechnology companies unable to list on their home market, are joined with domestic start-ups and spin-outs from U.K. universities many years away from clinical development. It is for this reason that IBT has very little exposure to the AIM market and with its global focus has found better, lower risk investment propositions in the U.S., Australia and Canada which have shown significant returns in the last six months.

While the pace of biotechnology IPO exits may be slowing, M&A activity (in the sector in general, and in the IBT portfolio specifically) seems to be increasing to compensate, due to the various pressures on the pharmaceutical industry outlined above. We see two implications from this for IBT and the biotechnology sector over the next six to eighteen months. Firstly M&A activity may continue to increase as the pressures on the pharmaceutical sector continue and there is competition for the best biotechnology assets. Secondly, as generalist investors come to appreciate the biotechnology sector as a high beta but increasingly profitable sector, we expect to see an increase in the flow of funds to the biotechnology sector.

Investment Manager's Review

continued

SUMMARY PORTFOLIO COMPANY NEWS

QUOTED COMPANIES

During the period under review there have been three FDA approvals for new drugs at portfolio companies Nektar, OSI Pharmaceuticals, and Celgene. In late January 2006 Nektar and partner Pfizer received approval in the U.S. and Europe for the first inhaled insulin for patients with either type I or type II diabetes, while OSI Pharmaceuticals received an additional approval for its oncology drug Tarceva in pancreatic cancer. In late December 2005 Celgene received a first approval for its oncology drug Revlimid in myelodysplastic syndromes, a type of blood cancer. Celgene followed the initial approval by an application for a further approval in the larger indication of multiple myeloma in early March 2006. This brings to three the new drug applications (NDAs) submitted by portfolio companies which are under review at the FDA and are expected to be approved before the end of IBT's year in August. The other two NDAs have already received approvable letters and complete response notifications from the FDA to portfolio companies Noven and MGI Pharma.

In addition there have been further NDA submissions by portfolio companies Pozen, New River Pharmaceuticals and Shire which are expected to have a standard eleven month review cycle. Further regulatory filing activity is expected before the IBT year end, which has been due to positive clinical trial events in the interim period, with NDAs expected to be filed by portfolio companies Progenics and Alexion.

At the end of the interim period, Progenics Pharmaceuticals was the largest quoted holding and, as expected, the company reported a second positive phase III clinical trial for its lead product methylnaltrexone for the relief of the side-effects of opiates in cancer patients. The more unpredictable, but nevertheless positive news from Progenics came at the end of December 2005 when they announced a global commercialisation collaboration with Wyeth worth \$60m in up-front payments plus milestones and royalties.

Other commercial agreements signed by IBT portfolio companies since the year-end in August 2005 were at portfolio companies GPC Biotech, Jerini and Sonus Pharmaceuticals. In mid-December 2005, GPC Biotech and Pharmion announced a marketing and development agreement whereby GPC licensed European marketing rights for Satraplatin, its phase III oncology product for hormone-refractory prostate cancer, to Pharmion for \$37.1m up-front plus royalties and milestone payments. This

particular licensing deal marks an interesting development where a German biotechnology company licensed European rights to its drug to a US company whilst retaining U.S. rights for itself.

Jerini, a recent German IPO (in November 2005) announced the licensing of its lead product Icatibant, in phase III for hereditary angiodema, to Kos Pharmaceuticals of the U.S. for €12m in up-front payments, a €10m equity investment, plus royalties and milestones, a week after its IPO. Paradoxically the stock traded down on this news and we were happy to invest in a Phase III clinical stage company after this commercial milestone, at a cheaper price than at the IPO.

UNQUOTED COMPANIES

Positive developments in the unquoted portfolio have been the main driver of NAV performance since the year-end in August. In late December 2005, AstraZeneca announced that they were acquiring portfolio company KuDOS at a 2.3 multiple to our carrying value, £3.6m, less transaction costs. The first tranche of the proceeds was received at the end of February and increased IBT's cash position to £7.1m or 10.3% of NAV at the end of the period under review.

In early January 2006 the merger of portfolio companies Cancervax (quoted) and Micromet (unquoted) was announced. The valuation of Micromet has been written up by the Directors to reflect the link to Cancervax, although a full valuation will not be recognised until any uncertainty has been removed by the approval by shareholders for the transaction. This initially resulted in a valuation increase of £0.9m (from £2.3m to £3.2m), after which the appreciation of the Cancervax share price resulted in the valuation of the Micromet holding at the end of the period under review being £5.3m.

In early 2006, the Board approved a write-down in Affibody from £1.5m to £0.6m reflecting an impending funding event.

Investment Manager's Review

continued

PORTFOLIO SUMMARY AT 28 FEBRUARY 2006

At the end of our interim period, IBT had investments in 46 companies – 35 quoted companies (representing 67.0% of NAV) and 11 unquoted companies (representing 22.7% of NAV). The remaining 10.3% was made up of cash, money market instruments and other net current assets (£7.1m) increasing a few days before the period end by the partial realisation proceeds of the KuDOS sale to AstraZeneca.

Members of SVLS sat on the Boards of nine portfolio companies at the end of the period under review, these were Affibody, Archemix, Cancervax, Dynogen, GlycoFi, Micromet, PowderMed, Spinal Kinetics and Trine.

The geographical split of the portfolio at the end of the period under review was mainly invested in the U.S. where 55.3% of NAV was invested. IBT had one investment each in Australia and Canada (2.5% and 4.6%, respectively of NAV), while in continental Europe and the UK, 14.8% and 12.5% of NAV was invested, respectively. By sub-sector, 71.1% of NAV was invested in biopharmaceuticals, 4.6% in drug delivery, 5.5% in medical devices and 8.5% in other areas, with cash, money market instruments and other net assets making up the balance.

Despite IBT's focus on the small to mid-capitalisation space most of the investments have products in late stage clinical development. At the end of the interim period, fifteen companies had a product on the market, three had filed for approval, thirteen had products in phase III clinical development while five had products in phase II development. Only two companies had a product in the earliest stage of clinical development (phase I) and seven companies were classified as other with either platforms or devices in development.

In terms of the cash positions of the portfolio companies, it was estimated at 28 February 2006 that twenty-six were either profitable, or have two or more years of cash remaining, fourteen had more than one, but less than two, years of cash remaining and six had less than one year of cash remaining. Of those six with less than one year of cash, five were unquoted with impending funding events in which IBT may participate and one (Micromet) is merging with a quoted cash shell (Cancervax).

At the end of the period under review, the quoted portfolio comprised of 35 investments. There have been eleven

divestments from the quoted portfolio since the previous year end in August 2005 and these have mostly been due to instances where negative clinical, regulatory or commercial news were expected. A case in point is Canadian company QLT which IBT fully divested after September 2005 and since that time the CEO has left and there has been a clinical trial failure, a regulatory disappointment, a patent challenge and a profits warning. To balance the divestments, further investments have been made in portfolio companies such as AnorMED, Cambridge Antibody Technology and Progenics, where valuation or the expectation of positive clinical news prompted an increase in net assets. New investments have been made in, for example, Pozen and the Medicines Company in the U.S., Actelion in Switzerland, and GPC biotech and Jerini in Germany.

VALUATION

At 28 February 2006 the IBT unquoted portfolio (value £15.6m) represented 22.7% of net assets, compared to 28.6% the prior year. Two new unquoted investments were made during the period under review, adding £1.4m to the unquoted portfolio. These investments were GlycoFi and Spinal Kinetics. GlycoFi is a platform company based on technology which enables therapeutic proteins to be produced in yeast which have the same sugar pattern as those produced by human cells. Yeast cell production has significant cost advantages to mammalian cell production of, for example monoclonal antibodies. In addition, therapeutic proteins which do not have the correct human sugar (or glycosylation) pattern are recognised as foreign by the immune system and are rapidly cleared from the body. In addition to the cost savings in manufacturing, appropriately glycosylated therapeutic proteins have a longer life in the body and require lower doses to be effective than the same protein produced in bacteria or non-human cell lines. In the last six months GlycoFi has signed deals with Eli Lilly and Merck.

Spinal Kinetics is a medical device company developing a new generation replacement spinal disc. Follow-on investments were made or committed to in the period under review in Archemix, Micromet, Oxagen and Dynogen, adding a total of £1.6m to the unquoted portfolio.

During the period under review, the net effect of the change in the Directors' valuations of unquoted companies was an increase in NAV for the period of £4.1m, representing 7.1% of net assets at the start of the period.

Investment Manager's Review

continued

The valuation of KuDOS was written up by £2.0m (including dividend distribution) at the end of December 2005 to reflect the acquisition by AstraZeneca which completed at the end of February 2006 and a portion of the proceeds remain in escrow. The valuation of Affibody was written down by £0.9m in early January 2006 to reflect a future funding event. Also in early January 2006, Micromet was written up to reflect the announced merger between it and portfolio company Cancervax. The valuation of Micromet at 28 February 2006 was £5.3m (having been £2.1m at 31 August 2005) and reflects a prudent valuation of the expected proceeds prior to shareholder approval of the merger and is derived from the Cancervax share price which doubled after the proposed merger was announced.

SV Life Sciences

28 April 2006

Ten Largest Equity Holdings

at 28 February 2006

Company	Market Value of Holding £'000	% of Group Shareholders' Funds	Country	Business Activity
1 Micromet *	5,291	7.7	Germany	Micromet designs and develops novel antibody derived therapies for the treatment of severe human diseases. Micromet has two clinical candidates and partnerships with Serono, Enzon and MedImmune
2 Progenics Pharmaceuticals	3,308	4.8	USA	Progenics is a biopharmaceutical company focusing products for the treatment and prevention of cancer and viral diseases. The company's lead drug, methylalntrexone has successfully completed two phase III studies for patients with advanced cancer.
3 AnorMED	3,130	4.6	Canada	AnorMED discovers and develops small molecule therapeutics for the treatment of HIV infection and cancer. The company has one product in phase III and one in phase II.
4 Aderis Pharmaceuticals*	2,855	4.2	USA	Aderis is a small molecule discovery and development company with investigational compounds in CNS, cardiovascular and renal therapeutic areas. Aderis has partnerships with Schwarz Pharma AG and King Pharmaceuticals.
5 Cambridge Antibody Technology	2,554	3.7	UK	CAT discovers and develops monoclonal antibodies (MAbs). The company's MAbs are used in human therapeutics and the drug discovery process. CAT's development partners and licensees include Abbott Laboratories, AstraZeneca and Human Genome Sciences.
6 Genosis	2,527	3.7	USA	Genosis is a medical device company with proprietary technology for the diagnosis of reproductive disorders. The company's first product offering is an over-the-counter in-vitro diagnostic for screening male and female fertility which has received regulatory approval and is marketed by Boots in the UK.
7 OSI Pharmaceuticals	2,087	3.0	USA	OSI is a research and development company focused in the areas of oncology and diabetes. OSI has one approved drug, Tarceva, developed and commercialised in collaboration with Genentech.
8 Pozen	2,031	3.0	USA	Pozen is a specialty pharmaceutical company focused in the area of innovative drug development for pain and migraine. The company's lead product is under review by the FDA and has been developed in collaboration with GSK.
9 Sunesis Pharmaceuticals	1,804	2.6	USA	Sunesis is a clinical-stage biopharmaceutical company focused on the discovery, development and commercialisation of novel small molecule therapeutics for oncology and other unmet medical needs.
10 Alexion Pharmaceuticals	1,770	2.6	USA	Alexion discovers and develops compounds for the treatment of autoimmune and cardiovascular diseases. The company develops C5 complement inhibitors and Apogens, two classes of potential therapeutics designed to target disease-causing segments of the immune system.

Notes to the Financial Statements

1. ACCOUNTING POLICIES

EU law (IAS Regulation EC 1606/2002) requires that the next annual consolidated financial statements of the Group, for the year ending 31 August 2006, be prepared in accordance with accounting standards adopted for use in the European Union (EU) further to the IAS Regulation (EC 1606/2002) ("accounting standards adopted by the EU").

This interim financial information has been prepared on the basis of the recognition and measurement requirements of accounting standards adopted by the EU as of 28 February 2006 that are effective at 31 August 2006, the Group's first annual reporting date at which it is required to use accounting standards adopted by the EU. Based on these standards, management has applied the accounting policies, as set out below, which they expect to apply when the first annual financial statements are prepared in accordance with accounting standards adopted by the EU for the year ending 31 August 2006.

However, the accounting standards adopted by the EU that will be effective in the annual financial statements for the year ending 31 August 2006 are still subject to change and to additional interpretations and therefore cannot be determined with certainty. Accordingly, the accounting policies for that annual period will be determined finally only when the annual financial statements are prepared for the year ending 31 August 2006.

(a) Basis of Accounting

The Group accounts consolidate the accounts of the Company and its wholly-owned subsidiary, IBT (2004) Limited. These financial statements have been prepared on the historical cost basis of accounting, modified to include revaluation of investments. The principal accounting policies adopted are set out below. Where presentational guidance set out in the Statement of Recommended Practice ("the SORP") for investment trusts issued by the Association of Investment Trust Companies ("the AITC") in January 2003 and revised in December 2005 is consistent with the requirements of IFRS, the Directors have sought to prepare the financial statements on a basis compliant with the recommendations of the SORP.

The disclosures required by IFRS 1 concerning the transition from UK GAAP to IFRS are given in note 6.

(b) Presentation of income Statement

In order to better reflect the activities of an investment trust company, and in accordance with guidance issued by AITC, supplementary information which analyses the Income Statement between items of a revenue and capital nature has been presented alongside the Income Statement.

(c) Investments

Investments are recognised and derecognised on a trade date when a purchase or sale of an investment is under a contract whose terms require delivery of the investment within the timeframe established by the market concerned.

All the Group's investments are defined by IFRS as investments designated as fair value through profit and loss.

Quoted investments are valued at either bid price or the last traded price, according to the recognised conventions of the relevant market at the balance sheet date.

In respect of unquoted investments, or where the market for a financial instrument is not active, fair value is established by using various valuation techniques, in accordance with International Private Equity and Venture Capital ("IPEVC") Valuation Guidelines. These may include using recent arm's length market transactions between knowledgeable, willing parties, if available and reference to the current fair value of another instrument that is substantially the same. Where there is a valuation technique commonly used by market participants to price the instrument and that technique has been demonstrated to provide reliable estimates of prices obtained in actual market transactions, that technique is utilised. Where no reliable fair value can be estimated for such unquoted investments, they are carried at cost, subject to any provision for impairment.

Transaction costs incurred on the acquisition or disposal of investments are expensed and included in the capital column or deducted from the proceeds of sale as appropriate.

Notes to the Financial Statements

continued

(d) Financial instruments

The Group's activities expose it primarily to the financial risks of changes in market prices, foreign currency exchange rates and interest rates. Financial instruments which the Group may enter comprise quoted and unquoted investments. These are recognised at the balance sheet date at fair value through profit and loss.

Except for the amendments required in connection with the adoption of IFRS as listed above the accounting policies have not varied from those described in the Report and Accounts for the year ended 31 August 2005.

2. ADMINISTRATIVE EXPENSES

	For the six months to 28 February 2006 £'000	For the six months to 28 February 2005 £'000	For the year to 31 August 2005 £'000

Creditors: amounts falling due after more than one year	–	–	–
Net assets	55,154	3,219	58,373
Capital and reserves			
Called up share capital	11,954	–	11,954
Capital redemption reserve	11,043	–	11,043
Share purchase reserve	66,467	–	66,467
Capital reserves	(24,097)	3,219	(20,878)
Revenue reserve	(10,213)	–	(10,213)
Total shareholders' funds – equity	55,154	3,219	58,373
Net asset value per ordinary share – pence	115.35	6.73	122.08

Notes to the restatement of opening balances

The effect of revaluation of non-current investments from mid to bid value was nil. The discounts previously applied to quoted investments have been removed.

9. COMPARATIVE INFORMATION

The results for the six months to 28 February 2006 and 28 February 2005, which are unaudited, constitute non-statutory accounts within the meaning of Section 240 of the Companies Act 1985. The comparative figures for the financial year ended 31 August 2005 are not the Group's statutory accounts for that financial year. Those accounts have been reported on by the Group's auditors and delivered to the registrar of companies. The report of the auditors was unqualified and did not contain a statement under section 237(2) or (3) of the Companies Act 1985.

10. NOTE ON MERRILL LYNCH SMALL-CAP BIOTECH INDEX (MLSCI) (£ ADJUSTED)

The MLSCI represents Biotech stocks with market capitalisation under US\$1 billion. The movement in the MLSCI from 31 August 2005 to 28 February 2006 in US\$ terms, based on the data received from Merrill Lynch, is 4.2% (or 15.8% before re-categorisation). The movement in sterling terms has been calculated using the prevailing exchange rates at the start and end of the reporting period, sourced from Factset and Bloomberg.

The data underlying the MLSCI changes regularly in line with changes in index constituents, price adjustments and corporate actions. The historic data is then retrospectively adjusted. As a result the performance for the reporting period, calculated at a future date, is likely to be different from the previously published index movement.

Independent Review Report by KPMG Audit Plc

TO THE MEMBERS OF INTERNATIONAL BIOTECHNOLOGY TRUST PLC

We have reviewed the accompanying consolidated balance sheet of International Biotechnology Trust Plc ("the Company") as of 28 February 2006, and the related consolidated statements of income, changes in equity and cash flows for the 6 month period then ended (the interim financial information). This consolidated interim financial information is the responsibility of the Company's management. Our responsibility is to issue a report on this interim financial information based on our review.

We conducted our review in accordance with the International Standard on Review Engagements 2400. A review is limited primarily to inquiries of company personnel and analytical procedures applied to financial data and thus provides less assurance than an audit. We have not performed an audit and accordingly, we do not express an audit opinion.

20

Based on our review, nothing has come to our attention that causes us to believe that the accompanying consolidated interim financial information is not prepared, in all material respects, in accordance with the basis set out in Note 1, which describes how the recognition and measurement requirements of accounting standards adopted by the EU have been applied, including the assumptions management has made about the policies expected to be adopted when management prepares its first annual financial statements in accordance with accounting standards adopted by the EU as of 31 August 2006.

Without qualifying our review conclusion, we draw attention to Note 1 to the consolidated interim financial information that explains why there is a possibility that the Company's management may determine that changes to the accounting policies adopted in preparing the consolidated interim financial information are necessary when management prepares its first annual financial statements in accordance with accounting standards adopted by the EU as of 31 August 2006.

Company Summary

THE COMPANY

International Biotechnology Trust plc is an investment trust listed on the London Stock Exchange. It is an independent investment trust managed by SV Life Sciences Managers LLP and administered by Schroders.

Investment trust companies are able to switch investments without liability for capital gains tax. This, together with the advantages of professional management and spread of risk, makes investment trusts a valuable investment medium.

The Articles of Association of the Company contain provisions requiring the Directors to put a proposal for the continuation of the Company to Shareholders at the Company's Annual General meeting every two years from 2003. The next continuation vote will be proposed at the Annual General Meeting in 2007.

SHARE PRICE INFORMATION AND THE INTERNET

The Company's shares are listed on the London Stock Exchange. The price of the shares is quoted daily in the Financial Times, The Daily Telegraph and The Times.

The Company maintains a website, www.internationalbiotrust.com. The website includes details of investee companies, copies of recent press releases, information on the Board of Directors, the latest factsheet, net asset value and share price information and copies of the Annual Report and Interim Report. The factsheet is updated monthly and is available to shareholders, in printed form, on request from the Company Secretary.

The Company releases its net asset value to the market on a weekly basis.

CAPITAL GAINS TAX INFORMATION

The acquisition costs of the shares for capital gains tax purposes based upon initial dealings are as follows:

- for the benefit of those shareholders who acquired their holdings in the original Offer for Subscription, with initial dealings on 6 May 1994:

Each ordinary share of 25p each:	92.38p
----------------------------------	--------
- for the benefit of those shareholders who acquired their holdings in the first C share issue, with initial dealings on 21 March 1996:

Each ordinary share of 25p each:	95.15p
----------------------------------	--------
- for the benefit of those shareholders who acquired their holdings in the second C share issue, with initial dealings on 9 June 1997:

Each ordinary share of 25p each:	97.75p
----------------------------------	--------

For the 2006/2007 tax year, the annual capital gains (after adjusting for indexation and taper relief) of private individuals in excess of £8,800 (2005/2006: £8,500) are assessed for capital gains tax.

Capital gains on shares disposed of by individuals may be eligible for taper relief. The taper reduces the amount of a chargeable gain according to how long the asset has been held for periods after 5 April 1998. Where shares were acquired before 6 April 1998, the gain will also be reduced by indexation allowance for the period up to April 1998, but not thereafter.

ASSOCIATION OF INVESTMENT TRUST COMPANIES

The Company is a member of the Association of Investment Trust Companies, which produces monthly publications of detailed information on the majority of investment trusts. Copies of these publications can be obtained by subscription on application to the Association of Investment Trust Companies, 9th Floor, 24 Chiswell Street, London EC1Y 4YY.

The aims of the Association are to protect and promote the interests of member companies and their shareholders by:

- taking specific action to safeguard and to improve the fiscal and regulatory regime for member companies and their shareholders
- improving investor awareness of investment trusts through education, publicity and the provision of reliable statistical and other information
- encouraging commitment to good practice and high professional standards in the industry.

SCHRODER INVESTMENT TRUST DEALING SERVICE

The Schroder Investment Trust Dealing Service provides a convenient and cost effective means of investing in the ordinary shares of the Company. The Service offers investors:

- a regular investment option from a minimum of £50 per month
- a lump sum investment option from a minimum of £1,000
- daily dealing
- competitive charges
- the option to reinvest income.

Other investment trusts which are available through this service are Schroder AsiaPacific Fund plc, Schroder Income Growth Fund plc, Schroder Japan Growth Fund plc, Schroder Split investment Fund plc, Schroder Split ZDP plc, Schroder UK Growth Fund plc, Schroder UK Mid & Small Cap Fund plc and SVG Capital plc.

Company Summary continued

INDIVIDUAL SAVINGS ACCOUNT – SCHRODER MAXI ISA PLAN

Schroders are providing a non CAT standard investment trust ISA, which includes International Biotechnology Trust plc. The investment trust ISA is designed as a maxi account, made up entirely of a stocks and shares component; a cash or insurance component is not offered. The Schroder ISA offers investors:

- lump sum investments in the ordinary shares of the Company from a minimum of £1,000 to a maximum of £7,000 in the current tax year
- a regular investment option from a minimum of £50 per month
- competitive charges
- the option to reinvest income
- the option to include other trusts.

If you would like further information about the Schroder Investment Trust Dealing Service or the Schroder Maxi ISA, please contact the Secretary of the Company at 31 Gresham Street, London EC2V 7QA or call Schroder Investor Services on freephone 0800 718 777.

REGISTRAR SERVICES

Communications with shareholders are mailed to the address held on the register. Any notifications and enquiries relating to registered shareholdings, including a change of address or other amendment should be directed to Lloyds TSB Registrars Scotland at PO Box 28448, Finance House, Orchard Brae, Edinburgh EH4 1WQ. The Shareholder Helpline telephone number of Lloyds TSB Registrars is 0870 601 5366.

Lloyds TSB Registrars Scotland maintain a web-based enquiry service for shareholders. Currently the "Shareview" site (address below) contains information available on public registers. Shareholders will be invited to enter their name, shareholder reference (account number) and post code and will be able to view information on their own holding. Visit www.shareview.co.uk for more details.
